

Achievement Standard

Subject Reference Physics 1.3

Title Demonstrate understanding of wave and light behaviour

Level 1 **Credits** 5 **Assessment** External

Subfield Science

Domain Physics

Status Registered **Status date** 5 November 2007

Planned review date 28 February 2009 **Date version published** 5 November 2007

This achievement standard involves demonstrating knowledge and understanding of wave characteristics, the behaviour of waves at plane boundaries and the use of appropriate methods to solve related problems.

Achievement Criteria

Achievement	Achievement with Merit	Achievement with Excellence
- Identify or describe aspects of phenomena, concepts or principles. - Solve straightforward problems.	- Give descriptions or explanations in terms of phenomena, concepts, principles and/or relationships. - Solve problems.	- Give explanations that show clear understanding in terms of phenomena, concepts, principles and/or relationships. - Solve complex problems.

Explanatory Notes

- 1 This achievement standard is derived from *Physics in the New Zealand Curriculum*, Learning Media, Ministry of Education, 1994, Level 6 achievement objectives, p. 16.

- 2 Assessment will be limited to a selection from the following:

Phenomena, Concepts and Principles:

Waves

Longitudinal waves, transverse waves, period, wavelength, frequency, amplitude, speed.

Light

Rectilinear propagation of light.

Reflection at a plane surface, including virtual images, lateral inversion.

Refraction at a straight boundary between two media, including refraction through triangular prisms and rectangular blocks, virtual images, dispersion of white light through a triangular prism, total internal reflection, critical angle.

Speed of light in different media, refractive index.

Relationships:

$$v = \frac{d}{t} \quad v = f\lambda \quad f = \frac{1}{T} \quad \frac{n_1}{n_2} = \frac{v_2}{v_1}$$

- 3 Real life contexts will be used whenever possible. Requisite information about the context used will be supplied.
- 4 The following descriptions provide guidance on the typical performance for achievement, achievement with merit and achievement with excellence. Both the complexity of the situation and problem-solving process will determine the grade.
- a Statements, descriptions and explanations can be written, diagrammatic or graphical.
- Achievement will typically involve single aspects related to phenomena, concepts or principles.
 - Achievement with merit will typically involve reasons.
 - Achievement with excellence will typically have minimal irrelevancies.
- b A physics problem involves a process(es) to find a physical quantity. A process involves recognising the relevant concept or principle, selecting the method (eg formula, graph, diagram, logical deduction), and selecting the relevant information.
- A *straightforward problem* is one involving a single process. The relevant concept or principle will be transparent, the method will be straightforward (a formula will need no more than a simple rearrangement), and the information will be directly usable.
 - For achievement with merit, a *problem* is typically one in which the relevant concept or principle may not be immediately obvious, the method may involve the use of a complex formula or rearrangement, or the information may not be directly usable or immediately obvious.
 - A *complex problem* will typically involve more than one process. The recognition of two different concepts must be involved.

- 5 Formulae listed in this achievement standard will be supplied.
 - 6 Minor computational or transcription errors will not be penalised if the process used to determine the solution is clearly indicated and valid.
 - 7 Students must be aware of the appropriate use of units. Both negative index (eg m s^{-2}) and slash notation (eg m/s^2) will be acceptable when writing units. Negative index notation will be used when supplying data.
-

Quality Assurance

- 1 Providers and Industry Training Organisations must be accredited by NZQA before they can register credits from assessment against achievement standards.
- 2 Accredited providers and Industry Training Organisations assessing against achievement standards must engage with the moderation system that applies to those achievement standards.
